

Georgiy Rannev

Backend Developer / Software Engineer / Junior

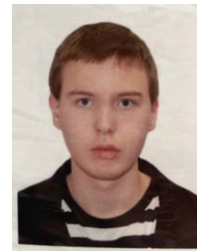

Email: eqorrannev@gmail.com

Date of birth: 28 August 2006

GitHub: github.com/grannev

Telegram: t.me/grannev

VK: vk.com/grannev

Profile

Student at Samara National Research University named after S. P. Korolev. Focused on backend development, with a strong foundation in algorithms, data structures, and object-oriented programming. Experienced in academic, personal, and commercial projects, relational database design, and REST API development. I write clear, documented code, study software architecture best practices, and quickly learn project-specific languages, libraries, and tools.

Experience

April 2026 – present

Backend Go Developer, Intern

AO «SimbirSoft»

Backend development for a web application.

July 2026 – August 2026

Software Developer, Intern

AO «MCST»

Work on the Elbrus operating system distribution and related software.

Education and Courses

2024 – present

Bachelor's degree

Samara National Research University named after S. P. Korolev

Major: Mathematical Support and Administration of Information Systems.

2026

Algorithms and Data Structures

Online course on the T-Education platform

Advanced study of algorithms and data structures.

2025

OzonTech E-CUP

Online competition on the Codenrock platform

Certificate: codenrock.com/certificate/607.

2024

Clustering Data with Python

Coursera, English-language online course

Fundamentals of data clustering with Python.

Skills and Tools

Programming languages

C, Go, C++, Python, Pascal, NASM

Technologies

Git, Docker, HTML, CSS

Other

Jira, GitHub, GitLab

Operating Systems

Linux, FreeBSD, Windows

Databases

PostgreSQL, MySQL

Projects

Corporate Merchandise Sales Service

Description	An internal service for selling branded merchandise to employees using a corporate points system.
Role	Backend Go Developer
Domain	Digital marketing

Key contributions

- Implemented login, logout, and token refresh with access and refresh tokens.
- Configured JWT authentication and role checks for protected endpoints.
- Integrated registration, authentication, user profile, catalog, and shopping cart functionality after merging feature branches.
- Implemented reviews, including migrations, models, repository and service layers, REST handlers, and routes.
- Added business rules: reviews only after purchase, one review per product, and deletion restricted to the review owner.
- Implemented pagination for list endpoints.
- Tested tasks and conducted code reviews.

Technologies: Go, Gin, pgx, golang-migrate, JWT, bcrypt, PostgreSQL, Docker, mock, pgxmock, golangci-lint, Git, GitLab.

File Compressor

Description	A file compressor based on Huffman coding for reducing input file size.
Domain	Software development

Key contributions

- Implemented the compressor in ANSI C and exposed its functionality through a reusable library.
- Made the library cross-compileable and suitable for integration with high-level languages, including Python.
- Built a Python GUI application with Tkinter.
- Built a command-line application using the same library.

Technologies: C, Python, Tkinter, Git.

Wireframe Graphics Renderer

Description	A wireframe renderer for Wavefront OBJ files built with GLUT and OpenGL.
Domain	Graphics and game development

Key contributions

- Built rendering on top of the basic GLUT capability to draw a point at an arbitrary screen position.
- Implemented parsing of Wavefront OBJ files.
- Added animation and rotation around the object's axes.

Technologies: Pascal, GLUT, OpenGL, Git.

Cross-Platform Messenger in Python

Description	A cross-platform messenger with basic friend management and messaging functionality.
Domain	Social media

Key contributions

- Built a graphical client exposing all implemented features.
- Implemented a server for handling connections and requests.
- Developed an ORM layer for MySQL access.
- Implemented multithreaded request processing.
- Added asynchronous handling of new server connections.
- Designed the architecture for future scalability.

Technologies: Python, PyQt6, asyncio, threads, MySQL, Git.

Additional Information

English: B1 Intermediate, [EF SET certificate](#).
