

RESUME

Target:
Trainee

Full name: Georgiy Rannev
Email: egorrannev@gmail.com
Date of birth: 28.08.2006

ABOUT

Student of SNRU named after S.P. Korolev. I'm interested in backend technologies, have a solid foundation in algorithms, data structures, and OOP principles. Experienced in developing pet projects/commercial solutions, designing relational databases, and building REST APIs. I write clean, well-documented code and actively study architectural best practices. Highly motivated to grow professionally within a strong team, quickly adapt to new tech stacks, and contribute to driving business goals. Can study any programming language and lib/tech for it if project will need to.

EXPERIENCE

Apr 2026 — present time	Backend Golang-developer (Trainee) AO «SimbirSoft» (WEB-App server development)
Jul 2026 — Aug 2026 (2 months)	Programmer-developer (Trainee) AO «MCST» (Elbrus distribution and software)

EDUCATION

2024 — present time	Samara National Research University named after S.P. Korolev, Bachelor's degree in Mathematical Support and Administration of Information Systems
2026	"Algorithms and Data Structures", online course on the T-Education platform
2025	"OzonTech E-CUP", online contest on the platform Codenrock, https://codenrock.com/users/102275/certificates/607
2025	"Introduction Human Physiology", online course in English, www.coursera.org
2024	"Clasterization of Data in Python", online course in English, www.coursera.org

SKILLS

Programming Languages	Operating Systems
• C • Go • C++ • Python • Pascal • Nasm	• Linux • FreeBSD • Windows
Frontend	Other
• XHTML • CSS3	• Git • Jira • GitHub • PostgreSQL • MySQL • Docker

PROJECTS

Merchandise Sales Website

Project Description	Development of an internal corporate service for selling branded merchandise to employees using an internal points system
Project Role	Backend Golang Developer
Project Domain	Digital Marketing
Completed Tasks	• Implemented authentication: login, logout, and refresh using access/refresh tokens; • Configured JWT authentication and role checks for protected endpoints; • Integrated registration, authentication, user profile, catalog, and cart after merging several feature branches; • Implemented review functionality: migrations, models, repository layer, service layer, REST handlers, and routes; • Added business rules for reviews: reviews only after purchase, one review per product, and users can delete only their own reviews; • Implemented pagination for list endpoints;
Core Technologies	Go, Gin, pgx, golang-migrate, JWT, bcrypt, PostgreSQL, Docker, mock, pgxmock, golangci-lint, Git, GitLab

File Compressor

Project Description	A file compressor that uses Huffman coding to reduce the size of the input file
Project Domain	Software Development
Completed Tasks	• The implementation is written in pure ANSI C; • All compressor functionality is provided as a library; • Cross-compilable library; • The library can be integrated with almost any high-level language, such as Python; • Python Tkinter application that uses the library functionality; • Console application that uses the library functionality;
Core Technologies	C, Python, Tkinter, Git

Graphics Render

Project Description	Wireframe render for Wavefront obj files using GLUT and OpenGL
Project Domain	Gamedev
Completed Tasks	• The program uses only the Glut library feature that allows drawing a point at an arbitrary position on the screen; • Implemented parsing of Wavefront OBJ files; • Implemented animation and object rotation around its axes;
Core Technologies	Pascal, Glut, OpenGL, Git

Cross-Platform Messenger in Python

Project Description	Cross-platform messenger providing basic functionality for adding friends and communicating with them
Project Domain	Social Media
Completed Tasks	• Graphical application providing access to all implemented features; • Server for handling all user connections and their requests; • Implemented an ORM for interaction with MySQL; • Multithreaded structure for processing user requests; • Asynchronous handling of new connections to the server;

	Designed an easily scalable system;
Core Technologies	Python, PyQt6, asyncio, threads, MySQL, Git
